

National Standardization Strategy

The Mauritius Standards Bureau is developing the National Standardization Strategy which will map out the standardization activities of Mauritius. The overarching objective of the strategy is to identify, prioritize and develop demand driven standards.

As a first step, the Bureau is consulting all its stakeholders before elaborating and fine-tuning the strategy.

In this context, interested parties are invited to submit proposals for standardization works. The Bureau will study these proposals and include them, if need be, in the standardization programme.
